

# Internet Telephony

## In this chapter, you will learn about :

- Describe the Internet
- State Volp protocol
- Download Skype
- Do audio and video calling using Skype

## INTRODUCTION

Internet is a global network of computers that connects multiple computers. Using the Internet, information can be shared in any part of the world as well as people can communicate with each other by sending text messages and by doing audio and video callings, etc. So, nowadays, Internet is a very popular medium of communication.

In this chapter, we will learn how we can do audio and video communication on the computer using the Internet.

## AUDIO AND VIDEO COMMUNICATION

Internet, allows us to make audio and video communication by using various audio and video communication services, like Skype, Gtalk, Viber, We Chat, etc. Audio and video communication is possible on the Internet using VolP protocol. Let us first learn about VolP protocol.

## VOLP PROTOCOL

VolP stands for Voice over Internet Protocol. It is used to transmit voice from one computer to another over the network, i.e. making telephone calls over the computer network. It converts analog voice signals into digital data and transmits the data over the network. VolP protocol helps the user to make real time audio and video calling over the Internet as well as audio and video conferencing.

Skype is the most popular communication service of the Internet that works on VolP protocol. Let us explore more about Skype.

## SKYPE

Microsoft's Skype is a software which is used to send text, voice and video over the network. You can also share videos, photos and files of any size by using Skype. Skype is an Internet Telephony Service provider that offers free calling between computers.

To use Skype, you need to have the following equipments :

- Internet connection.
- Speakers and a Microphone of Headphone.

- A Webcam, if you want to make video calls.
- Skype software

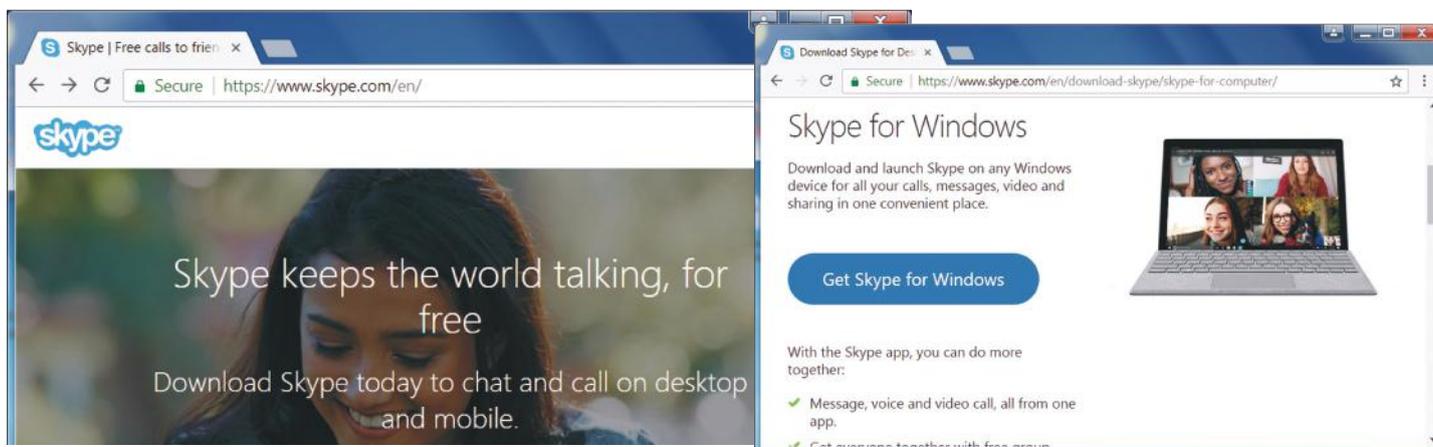

The Skype software is available on the Skype website. When you visit the website you will see the following two versions of it :

- Skype for Windows.
- Skype for Mac.

## Points to Remember

- Internet is a global network of computers.
- Internet is a very popular medium of communication.
- Audio and video communication is possible on the Internet using VoIP protocol.
- VoIP is used for making telephone calls over the computer network.
- Skype is the most popular communication service of the Internet.
- Skype is an Internet telephony service provider that offers free calling between computers.

## EXERCISE

### A. Tick (✓) the correct option :

- Which company provides the communication service Skype?  
(a) Microsoft  (b) Apple  (c) Samsung
- Which of the following is a communication software on the Internet?  
(a) Skype  (b) We Chat  (c) All of these
- Which protocol converts analog voice signals into digital data on the Internet during communication?  
(a) FTP  (b) VoIP  (c) SMTP
- Which of the following communication services on the Internet works on VoIP protocol?  
(a) Skype  (b) Gizmo  (c) All of these

### B. Fill in the blanks :

- \_\_\_\_\_ stands for Voice over Internet Protocol.
- \_\_\_\_\_ is a global network of computers.
- \_\_\_\_\_ is an Internet Telephony Service Provider.
- \_\_\_\_\_ are set of rules for communication on the Internet.

### C. Tick (✓) the correct statement and cross (X) the incorrect statement :

- We can do video communication over the Internet.
- By using Skype, we cannot send text messages.
- VoIP protocol allows only audio conferencing.
- Information can be shared by using the Internet.
- Webcam is required for video calling.

### D. Answer the following questions :

- What are protocols?
- How do we audio/video calling by using skype?
- What is VoIP?
- What are the features of Skype?
- How do you add contacts to the list in the Skype?

## ACTIVITY

- Visit the lab to do the following tasks :
  - Create an account in Skype.
  - Sign in with your username and password.
